

ASSAM POWER GENERATION CORPORATION LIMITED
NOTICE

ASSESSMENT OF VALUATION OF ASSETS OF UNIT-2 & UNIT-3, 132 KV PHASE-I POWER HOUSE SWITCHYARD, GAS COMPRESSOR WITH SPARES AND STORE MATERIALS OF LAKWA THERMAL POWER STATION (LTPS).

The Chief General Manager (Generation), APGCL, Bijulee Bhawan, 3rd Floor, Guwahati-1 invites offers from State and National level Govt. registered professional valuer with a validity period of 30 (thirty) days from the publication of this “NOTICE” for:

Assessment of valuation of assets of Unit-2 (15.0 MW) & Unit-3 (15.0 MW) including 132 KV Phase-I Power House Switchyard, Gas compressor with spares and Store Materials of Lakwa Thermal Power Station (LTPS) indicating professional fees including the GST (if any) along with terms & conditions to determine the exact “Present Disposable Value”. The list of materials to be disposed off is enclosed herewith (**Annex-I to Annex-VII**).

PROJECT BACKGROUND OF LTPS:

Commercial operation of the gas turbine (GT) Unit no.2 (15 MW) of Phase-I Power Plant of Lakwa Thermal Power Station (LTPS) was under forced shutdown since 16.04.2018 due to high combustor temperature. When the unit was under trial of restarting, the exhaust stack of the unit got completely damaged due to combustor outfire on 24.04.2018. Similarly, the GT no.3 of Phase-I Power Plant of LTPS was also under forced shutdown since 02.04.2018 due to high vibration problem. In view of newly commissioned LRPP Units on 26-04-2018 which are in place of the Phase-I units-1 to unit-4 of LTPS and in absence of adequate gas linkage/availability to run the present installed capacity of 167.2 MW of LTPS, it is viewed that restoration of LTPS Unit #2 and Unit #3 are not cost effective. The Phase-I plant is more than 35 years old and the Heat rate of the GT units are more than 3600 Kcal/Kwh. Central Electricity Authority (CEA) suggested for retirement of old & inefficient thermal units which are more than 25 years old.

Both the unit-2 and unit-3 were supplied and installed by M/s Westinghouse Corporation Limited, Ontario, Canada.

As both the decommissioned units are lying idle for some times; the machineries like turbine and generators are getting deteriorated. So, APGCL decided to dismantle and dispose off both the GT units (unit-2 & unit-3) and other related assets of LTPS Phase-I Power Plant “as scrap”. So, to fix the “Reserve Price” for tendering of the same APGCL need to ascertain the exact “Present Disposable Value” of the 02 (two) LTPS Units and other related assets “as scrap”.

Note: Interested Govt. registered professional valuer may take part in the bid for assessment of valuation of assets of LTPS to quote their professional fees including the GST (if any). Govt. registered professional valuer has to submit their offers to “The Chief General Manager (Generation), APGCL, Bijulee Bhawan, 3rd Floor, Guwahati-781001” within 30 (thirty) days from the publication of this “NOTICE”.
